

RM-PC1100

Advanced Step Controllers

Description

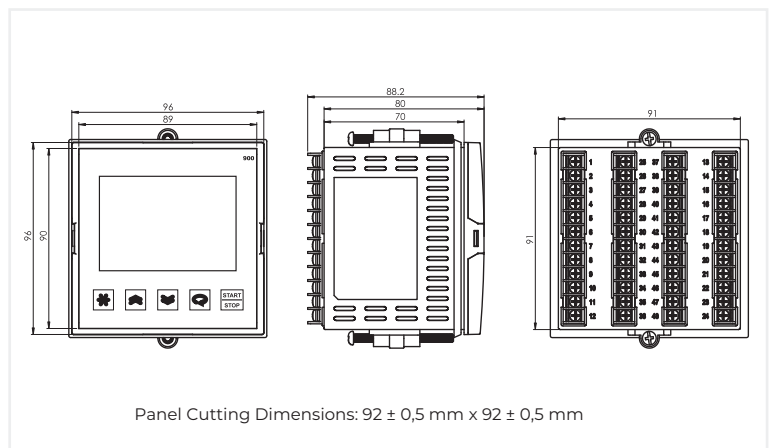

PC1100 Model devices are 96x96 mm sized devices designed for the measurement of many process variables in industrial environments such as temperature, pressure, speed, level, humidity, current, voltage, resistance, and other physical units, as well as for open/closed loop and PID control. They are completely modular, and each module can be configured independently. They are used in Food, Plastics, Iron & Steel, Chemistry, Metallurgy, Cement, Ceramics, Petro-Chemistry, Refineries, Glass, and other industrial branches. They are ergonomic devices based on compliance with international standards, reliability, and ease of use during the design phase.
